

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1-22 (Canceled)

23. (Currently Amended) A method, in a multi service telecommunications system, for managing unit reservation of an account by a credit management system associated with the service telecommunications system, ~~in a multi service telecommunications system~~, wherein services are provided in exchange for units, the method comprising:
reserving wherein a predetermined amount of units ~~is available~~ for the account ~~and which units are reserved~~ before provisioning of a service; and, ~~comprising:~~
executing a step of forced booking, during service provisioning by said credit management system, of actually consumed units for at least one service.

24. (Currently Amended) The method according to claim 23, wherein said step of forced booking is carried out if said amount of reserved units drops below a predetermined threshold.

25. (Currently Amended) The method according to claim 24, wherein the step of said forced booking is service dependent.

26. (Currently Amended) The method according to claim 25, wherein in connection with said forced booking a request for accreditation of said reserved units can be carried out for said services.

27. (Currently Amended) The method according to claim 26, wherein accreditation of said reserved units is subject to a plurality of accreditation rules.

28. (Currently Amended) The method according to claim 27, in which at least one of said accreditation rules is dependent on the actual use of said reserved units per unit of time per service.

29. (Previously Presented) The method according to claim 27, in which at least one of said accreditation rules is dependent on a classification of said services.

30. (Previously Presented) The method according to claim 29, wherein said classification is a prioritization.

31. (Currently Amended) The method according to claim 27, in which at least one of said accreditation rules is dependent on the amount of reserved units requested.

32. (Currently Amended) The method according to claim 27, in which at least one of said accreditation rules is dependent on the life-span of said requested reserved units.

33. (Currently Amended) The method according to claim 32, wherein said reserved and consumed units are monetary units.

34. (Currently Amended) The method according to claim 32, wherein said reserved and consumed units are units of time.

35. (Currently Amended) The method according to claim 32, wherein said reserved and consumed units are units of volume.

36. (Previously Presented) The method according to claim 35, wherein said volume is a data volume.

37. (Currently Amended) The method according to claim 32, wherein said reserved units relate to the amount of used bandwidth.

38. (Previously Presented) The method according to claim 37, wherein said account can be accessed by at least one user.

39. (Currently Amended) The method according to claim 38, which is used in a telecommunications environment, wherein at least one of the provided services ~~provided~~—relates to a group comprising voice, data and internet communications.

40. (Currently Amended) The method according to as described in claim 39, wherein said telecommunications environment is accessible via a group comprising wireless and fixed connections to a telecommunications network.

41. (Currently Amended) The method according to claim 40, wherein management or provisioning of said services is carried out by a plurality of service provisioning systems which are in communicative connection with said credit management system.

42. (Currently Amended) A multi service telecommunications system, comprising:

~~at least one~~ a credit management system, for registering or managing reservation of available units in an account comprising a predetermined amount of units, the credit management system comprising:

~~further comprising~~ means for providing services in exchange for available units, said means being further arranged for reserving units before provisioning of a service, wherein

said credit management system ~~[[is]]~~ being arranged for carrying out a forced booking of actually consumed units during service provisioning for at least one service.

43. (Previously Presented) The multi service telecommunications system according to claim 42, wherein said credit management system forms at least a part of a device comprised in said telecommunication system.

44. (Previously Presented) The multi service telecommunications system according to claim 42, wherein said credit management system forms at least a part of a user device comprised in an arrangement for connecting to said telecommunications system.
